

Mint of the United States at Philadelphia, Pa.,

COINER'S OFFICE,

May 11th, 1893.

Hon O. C. Bosbyshell
Superintendent

Sir:

The thread in the holes in the cast iron head of the Ferracute Coining press, where the long bolts run through the Arch to hold the upper dies has torn out - this permits the die holder to move about and consequently the die does not strike the centre of the planchet, the thread seems to have been too short in length to hold. A new head will have to be furnished and the Ferracute Company had better send here and see what is needed.

Very Respectfully
H. S. S.

Coiner.
